PROFESSIONAL SUMMARY

Enthusiastic and results-driven **Full Stack Developer** with over 6+ **years of experience** in designing and developing scalable web and mobile applications using modern JavaScript frameworks. Specialized in **React.js**, **Node.js**, and the **MERN stack**, with 3+ **years of hands-on experience in React Native** for building cross-platform mobile applications.

Proficient in front-end technologies including **HTML5**, **CSS3**, **SASS**, **JavaScript (ES6+)**, **Redux**, and **React Hooks**, along with strong experience in backend development using **Express.js** and **MongoDB**. Skilled in building and consuming **RESTful APIs**, integrating third-party services, and managing application state in complex frontend applications.

Well-versed in **unit testing** and **test-driven development (TDD)** using tools like **React Testing Library**, **Jest**, **Mocha**, and **Chai**. Experienced in developing and maintaining **custom reusable React component libraries** to ensure modular and scalable codebases.

Hands-on experience in **mobile development** using **React Native**, with proficiency in working with **Xcode** (iOS) and **Android Studio** for real-device testing and debugging. Familiar with **AWS cloud services** including **EC2**, **IAM**, and deployment strategies.

A strong team player with excellent communication and interpersonal skills, capable of delivering high-quality solutions while effectively collaborating within cross-functional teams or working independently. Known for being organized, detail-oriented, and highly motivated to explore emerging technologies and continuously improve development practices.

TECHNICAL SKILLS

- **Programming Languages**: JavaScript, TypeScript, PHP
- **Operating Systems**: Windows, Ubuntu (via SSH), macOS
- **Frameworks & Libraries**: React.js, React Native, Node.js, Express.js, Next.js, Socket.io, Jest.js, WebDriverIO
- **Web & Cloud Technologies**: RESTful APIs, AWS (EC2, IAM), Firebase, Service Workers, Webpack, CI/CD, SonarCloud
- **Databases**: MongoDB, PostgreSQL, MySQL, MS SQL
- **Version Control**: Git, GitHub, Bitbucket
- **Development Tools**: Xcode, Android Studio, Jira
- **Other Skills**: HTML5, CSS3, SCSS, Agile Development, UI/UX Design

ACADEMIC PROFILE

M.E. – Power Electronics and Drives (76.30%) **|** May 2020 | Dr. Sivanthi Aditanar College of Engineering.

B.E. – EEE (71.5%)| April 2015 | Sri Sairam Institute of Technology, Chennai.

HSSC – Computer Science (91.16%) | April 2011 | Anitha Kumaran Matric Higher Secondary School.

SSLC (86.60%) | April 2009 | Anitha Kumaran Matric Higher Secondary School.

PROFESSIONAL EXPERIENCE

1. Senior Software Engineer
Relevantz | *Aug 2025 – Present*

- Developing scalable, serverless backend solutions using AWS Lambda (Node.js), enabling efficient, event-driven processing and improved system performance for enterprise-grade applications.
- Building and enhancing responsive, high-performance user interfaces using React.js, ensuring seamless user experience across complex enterprise workflows.
- Integrating Stripe embedded components to implement secure, scalable, and customizable payment solutions tailored for enterprise use cases.
- Designing modular and reusable backend services with a focus on maintainability, scalability, and low-latency execution in serverless environments.
- Collaborating with cross-functional teams including product, QA, and DevOps to deliver robust features, streamline deployment workflows, and maintain high system reliability.
- Contributing to architectural decisions around serverless design patterns, API integrations, and payment workflows to support evolving business requirements.

---

2. Senior Software Engineer
Bahwan Cybertek | *Oct 2024 – July 2025*

- Spearheaded the complete development lifecycle of **WebStore**, a feature-rich e-commerce platform enabling users to place orders for home delivery or pickup from nearby physical stores, with an intuitive and responsive **React.js** frontend.
- Engineered a tailored **Customer Relationship Management (CRM)** system that automated order processing, customer notifications, and logistics coordination across multiple retail branches.
- Successfully integrated secure payment systems by incorporating multiple third-party gateways, facilitating smooth transactions via **UPI, credit/debit cards, and internet banking**.
- Designed and developed highly modular, scalable **RESTful APIs using Node.js**, enabling seamless integration with both **React.js web** and **mobile clients**, while ensuring codebase reusability and maintainability.
- Actively collaborated with product managers, designers, QA engineers, and DevOps to establish **CI/CD pipelines**, implement version-controlled deployments, and enforce testing strategies for maximum uptime and reliability.

---

3. Senior Software Engineer
Disprz | *Feb 2022 – Oct 2024*

- Architected a robust, **microservices-based backend** system using **Node.js**, enabling scalability, modularity, and ease of maintenance across different services and deployments.
- Played a key role in the implementation of **micro frontend architecture** using **React.js** and **module federation**, allowing independent teams to develop and deploy UI modules separately.
- In certain modules, utilized **iframe-based integrations** to support legacy systems and third-party applications while maintaining consistency in UI/UX.
- Led the development and optimization of **cross-platform mobile applications** using **React Native**, ensuring a unified experience across both Android and iOS devices.
- Applied modern frontend performance optimization techniques such as **code splitting**, **lazy loading**, and **tree shaking**, significantly improving load times and application responsiveness.

---

4. Full Stack Developer
Applaunch.io | *Feb 2021 – Feb 2022*

- Embraced **test-driven development (TDD)** methodology to write comprehensive unit and integration tests for both frontend and backend codebases using **Jest**, **Mocha**, and **Chai**, which resulted in improved code reliability and early bug detection.
- Managed **cloud-based deployments** using **AWS EC2**, ensuring high availability, security (via SSL/TLS), and cost-effective infrastructure for production workloads.
- Specialized in **Next.js** to implement **server-side rendering (SSR)**, which greatly improved SEO, initial load speed, and performance for content-rich applications.
- Integrated various **third-party APIs** (for user authentication, data analytics, and real-time notifications), extending the platform's capabilities and enhancing user engagement.

---

5. Associate Web Developer

Winze Technologies Pvt. Ltd. | *Jan 2020 – Feb 2021*

- Participated in the design and development of a fully functional **CRM platform** using the **MERN stack (MongoDB, Express, React, Node.js)**, enabling businesses to manage clients, interactions, tasks, and performance reports through a unified dashboard.
- Collaborated with the SEO team to incorporate **Next.js SSR** features, ensuring better search engine indexing for dynamic content and improving visibility in organic search rankings.
- Enhanced database performance by designing optimized **MongoDB schemas**, implementing indexes, and fine-tuning queries, which significantly reduced API response time and improved application efficiency.
- Worked alongside cross-functional teams to ensure feature completeness, code quality, and compliance with internal coding standards and industry best practices.

PROJECT SUMMARY

---

1. WebStore & CRM Platform

Company: Bahwan Cybertek | **Role**: Senior Software Engineer | **Team Size**: 12

- Led the design and development of **WebStore**, a scalable e-commerce platform enabling users to shop products with options for **home delivery** or **nearby store pickup** based on geolocation.
- Architected and developed a **custom CRM application** to streamline **order lifecycle management**, including customer engagement, order tracking, invoice generation, and inventory synchronization across retail nodes.
- Integrated **payment gateway services** to support multiple transaction modes such as **UPI**, credit/debit cards, and net banking using providers like Razorpay and PayU.
- Engineered backend microservices with **Node.js** and **Express**, facilitating scalable APIs for web, mobile, and CRM use cases.
- Deployed **CI/CD pipelines** via GitHub Actions and Docker, implementing blue-green deployment strategies for zero-downtime rollouts.
- Collaborated closely with product, QA, and infrastructure teams to meet sprint goals and ensure a production-ready platform with full **unit and integration test coverage**.

---

2. CRM Application

Company: Winze Technologies Pvt. Ltd. | **Role**: Associate Developer | **Team Size**: 8

- Played a pivotal role in the initial development of a **custom CRM system**, beginning with a stack of **Object-Oriented PHP** and **MySQL**, using **phpMyAdmin** for administrative tasks.
- Participated in a successful **migration to MERN stack**, refactoring backend logic using **Node.js** and Express and modernizing the frontend with **React.js**, significantly enhancing user experience and performance.
- Implemented core features like lead tracking, client communication history, task reminders, and user role management.
- Coordinated with designers and backend developers to maintain cross-functional consistency and effective API integration.

---

3. Internal Work Progress Application

Company: Winze Technologies Pvt. Ltd. | **Role**: Associate Developer | **Team Size**: 5

- Developed a **task monitoring dashboard** to track various company operations such as field wiring, site inspections, and installation workflows.
- Designed and built **role-based access control (RBAC)** to differentiate access and functionality between Admins and Field Workers, allowing status updates and data entry from field devices.
- Built a **real-time analytics dashboard** that provided progress summaries, task counts by status, and completion timelines using **React.js**, **Node.js**, and **MongoDB Aggregations**.
- Improved team efficiency by enabling centralized tracking and updating of site progress.

---

4. Healthcare Web & Mobile Application

Company: Applaunch.io | **Role**: MERN Stack Developer → Team Lead | **Team Size**: 10 (Led 5)

- Developed a **multi-role dashboard** for a healthcare client where trainers could monitor users' activity, send personalized feedback, and assess health metrics over time.
- Promoted to **Team Lead** based on performance, overseeing a React.js team and handling frontend design reviews, PR management, and component reusability standards.
- Introduced **Redux** and **Redux-Saga** to manage complex asynchronous interactions and cross-component data flow, reducing bugs and improving scalability.
- Coordinated with backend, UI/UX, and DevOps teams to ensure timely feature releases and sprint success.

---

5. COVID Certificate Progressive Web App (PWA)

Company: Applaunch.io | **Role**: MERN Stack Developer | **Team Size**: 7

- Engineered a **PWA-based application** for managing and validating COVID vaccination certificates, accessible both as a web and mobile app.
- Implemented **Service Workers** to enable **offline support**, **background sync**, and **push notifications**—allowing users to receive updates even without active internet connections.
- Built REST APIs with **Node.js** and hosted the entire full-stack app on **AWS EC2**, applying **SSL security** and autoscaling configurations.
- Developed CI/CD pipelines with GitHub Actions for continuous integration, testing, and delivery into staging and production environments.

---

6. Disprz Web Application (Micro Frontends)

Company: Disprz | **Role**: Senior Developer | **Team Size**: 22

- Collaborated with frontend engineers to build **micro frontend modules** using **React.js** and **Webpack Module Federation**, allowing independent feature deployment across development teams.
- Integrated authentication, dashboard widgets, analytics components, and user settings modules into the master shell app with minimal code coupling.
- Created and maintained **Node.js APIs** serving as data sources for frontend apps, focusing on modular design and reusability across services.
- Ensured responsiveness, accessibility, and performance optimization across all modules.

---

7. Disprz Mobile Application

Company: Disprz | **Role**: Senior Developer | **Team Size**: 10

- Designed and implemented various modules in the company's **React Native application**, supporting both Android and iOS with a unified codebase.

- Used **Xcode** and **Android Studio** for device-level testing, debugging, and resolving native integration issues.
- Developed features such as push notifications, offline course progress saving, in-app messaging, and biometric login.
- Worked with product and QA teams to align mobile releases with backend milestones and ensure consistent behavior across devices.

ACHIEVEMENTS & RECOGNITIONS

- **Winner** of the internal **Annual Engineering Hackathon** at *Disprz*, recognized for delivering an innovative solution and awarded a performance voucher for securing first place.
- Received a **client appreciation email** at *Applaunch.io* for the **successful and timely delivery** of a complex Healthcare Web & Mobile Application, exceeding expectations in quality and turnaround time.
- Honored with the **"Code Quality Award"** by engineering leadership at *Disprz* for consistently delivering clean, maintainable, and scalable code across multiple projects.
- Completed multiple **freelance web development projects**, crafting custom, responsive websites using **React.js** and **Node.js**, tailored to unique client specifications and business goals.
- Secured a **Top 5000 global rank** in a **LeetCode Weekly Contest**, demonstrating strong problem-solving skills and competitive programming proficiency.
- Earned professional certifications in **React.js** from **Udemy** and **LinkedIn Learning**, validating deep understanding of component-driven architecture, hooks, and frontend best practices.

RESPONSIBILITIES

- Actively **communicated with clients** to gather and refine business requirements for web applications and dashboards, contributing to **project design documentation**, **technical specifications**, and overall **project planning**.
- Participated in **Agile sprint planning sessions**, ensuring effective **story estimation, task breakdown**, and priority alignment to meet delivery timelines.
- Developed full-stack features using **React.js** and **Node.js**, including the creation of **RESTful APIs**, dynamic user interfaces, and integration with backend services.
- Provided **technical leadership to a small team**, assigning tasks based on expertise, tracking progress, and ensuring smooth and timely project execution.
- Conducted **comprehensive code reviews**, maintaining high standards for **code quality**, performance, and adherence to best practices across the codebase.
- **Mentored new joiners**, offering guidance on architecture, development workflows, and onboarding to the existing codebase to reduce ramp-up time.
- Delivered **sprint demos** to stakeholders and clients, highlighting key features, improvements, and progress made during each development cycle.
- Attended and contributed to **daily stand-ups**, code review sessions, and requirement clarification

meetings to ensure transparency and alignment across the team.

- Played a critical role in **release management**, overseeing the coordination and cherry-picking of changes across multiple **micro frontends** for stable production deployment.

DECLARATION

I hereby declare that the information provided above is true and correct to the best of my knowledge and belief.
